SUMMARY

Production Engineering undergraduate at UTFPR Medianeira (3rd semester), innovation scholarship holder ranked 1st in the InovaGrad/PROGRAD 2025 call. Intern at a management and process consultancy, serving a portfolio of 26 clients and compiling a survey of more than 400 companies for the sales team. I run a project of my own from scope to delivery and publish case studies in which I measure my own process, stating what the indicators support and what they do not allow me to claim. Profile oriented toward process organization, indicator analysis and continuous improvement, with interest in Operations, Production Planning and Control, Quality and Project Management.

EXPERIENCE

Production Engineering Intern · Operations

Jun 2026 – present

AntiFragil Gestão & Consultoria · Medianeira, PR

- Support of a portfolio of 26 clients, with weekly follow-up of action plans, control of open items and deadline enforcement
- Preparation of management reports and follow-up of client meetings, consolidating decisions, owners and next steps
- Participation in the process mapping of the client companies, alongside the consulting team
- Survey and qualification of more than 400 companies for the sales team, with organization of the information and prioritization criteria

Innovation Scholarship Holder · Project and Product Coordination

Mar 2026 – Dec 2026

MAT-IA Project · UTFPR Medianeira · InovaGrad · Advisor: Prof. Dr. Fausto Pinheiro da Silva

- Project ranked 1st in the InovaGrad/PROGRAD 2025 call, with a final score of 9.6 among candidates from across UTFPR
- Management of the project from scope to delivery: requirements gathering with the professors, prioritization of stages, definition of the tracking indicators and more than 100 deliveries logged on a Kanban board by milestone
- Application of in-person diagnostic tests in multiple classes, with results broken down by content area to guide the professor's decision
- Standardization of the grading criteria, with an attempt limit per question, cost per correction recorded and professor review by exception only
- Automation of the follow-up reports in a spreadsheet, eliminating the manual collection and tallying of results

PROJECTS

Action plan adherence dashboard

Jul 2026

Personal project · github.com/bernardoparanhos/painel-aderencia-plano-acao

- Six indicators for tracking action plans, each with the decision question it governs: schedule adherence, aging of open items, replanning rate, completion lead time, follow-up coverage and client risk ranking
- Adherence measured against the original deadline, never against the rescheduled one, so the indicator does not lose informational power when the ruler moves
- Output as a seven-tab workbook formatted for meeting reading, with a flattened base ready for Power BI
- Synthetic and reproducible data, with limitations stated: the project demonstrates the measurement method, it does not diagnose a real market

Case studies · MAT-IA from a Production Engineering perspective

2026

Published on my own portfolio, engenheiroparanhos.com.br

- Mapping of the platform as a production system: inspection points, rework limit, cost per unit and sequencing with precedence
- Measurement of the process of creating 670 questions from 506 database log records, with defects classified into seven families and first-pass yield calculated by batch
- A fixed section in each study on what the indicators do not allow one to claim and what to build next

EDUCATION

Bachelor of Production Engineering

Aug 2025 – Jul 2030

Universidade Tecnológica Federal do Paraná, UTFPR Medianeira · 3rd semester in progress

- Emphasis on Production Management, Production Planning and Control, Quality, Occupational Safety and Process Optimization

ADDITIONAL TRAINING

- Lean Six Sigma Yellow Belt · FM2S · in progress (2026)
- Claude Impressionador Certification · Hashtag Treinamentos · May 2026

SKILLS

Processes and Improvement: Process mapping · Standardization of routines · Continuous improvement · Definition of indicators with a decision question · Measurement of rework and scrap · Indicator analysis

Management: Project management · Kanban and milestone tracking · Action plans · Management reports · Meeting facilitation · Client portfolio support

Tools: Advanced Excel · Power BI · Google Sheets · Office 365 · Python (Pandas, openpyxl) · Report automation

Development: Python and SQL for data analysis · React, Node.js and Git, applied on the project platform

Native Portuguese · Basic English, currently learning · Medianeira/PR and region · Updated on August 5, 2026
